Code 39 Font for Windows-Based Workstations (Free 3 of 9)
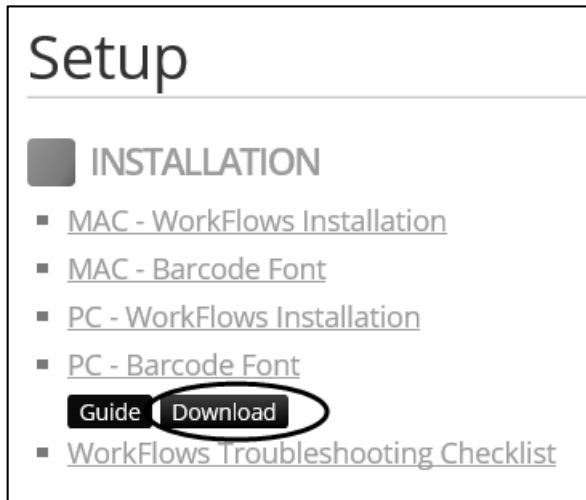

The font is available for download from the INFOhio WorkFlows handbook.

http://www.infohio.org/educators/library/workflows-handbook/category/handbook-setup

1. Download the **free3of9.ttf** barcode font by doing a **right click** on the [Download] link.

2. Depending on your browser, you will elect the **Save Target As** or **Save Link As** option from the window.

3. A **Save As** window will appear. If using Windows XP or Windows 7 or 8, save the file to your **desktop**. Otherwise locate the **C:\Windows\Fonts** folder or the **C:\WinNT\Fonts** on your computer. Once the folder is open, click the **save** button.

4. If using Windows XP or Windows 7 or 8, use your **Control Panel** to locate the **fonts** folder. Then drag & drop the **free3of9.ttf** file from your **desktop** to the **fonts** folder.

5. You may need to re-boot your computer for the font to be recognized.

Font: Free 3 of 9 Barcode (free3of9.ttf)

Free 3 of 9, like all of my fonts, is free. You can use it for most personal or business
uses you'd like, and I ask for no money. I would, however, like to hear from you. If
you use my fonts for something please send me a postcard or e-mail letting me know how
you used it. Send me a copy if you can or let me know where I can find your work.

You may use this font for graphical or printed work, but you may not sell it or include
it in a collection of fonts (on CD or otherwise) being sold. You can redistribute this
font as long as you charge nothing to receive it. If you redistribute it include this
text file with it as is (without modifications).

If you use this font for commercial purposes please credit me in at least some little
way.

About the font:

Can you believe there are people who would charge you for a barcode font like this? It
took very little time to make this so I thought I'd donate it to the world. It is
suitable for scanning even at fairly small point sizes (with a laser printer). I have
tested printed copies of this font with a couple different scanners and it worked
perfectly.

This is 3 of 9 (sometimes called "code 39"), a widely used barcode standard that includes
capital letters, numbers, and several symbols. This is not the barcode for UPC's
(universal price codes) found on products at the store. However, most kinds of barcode
scanners will recognize 3 of 9 just fine.

To create a valid 3 of 9 barcode you have to begin and end it with a special character.
Scanners look for this character to know where to start and stop reading the barcode. It
is represented in this font with the '*' character. So, to create a barcode for the text
"ABC123" you have to type out "*ABC123*". Note that barcode readers will not include the
*'s in the text they return. They will just give you the "ABC123".

The symbols included in 3 of 9 are $ % + - . and /. To include a space in your barcode
use '_' (shift '-').

There is an extended version of 3 of 9 that includes special codes for all of the ASCII
characters. If you are interested in using it please contact me. If I get enough
interest I will put a font together.
